

Plaistow Drawings List

Description: Of the total of 796 drawings, 537 originated directly from the drawing offices of the Plaistow Works and later of the Derby Works of the Midland Railway. These represent only a small proportion of the drawings originally created by this institution. The remaining 259 drawings were made for the use of the Plaistow Works by contractors who supplied locomotives, carriages and associated mechanical equipment. These contractors included Dubs & Co Ltd, Sharp Stewart & Co Ltd, Beyer Peacock Ltd, Westinghouse and other companies. The collection also contains a drawing register, which is accessible through Search Engine.

System of arrangement: The original system of arrangement of the drawings has been obscured as a result of successive transfers of location from the original company Works. The drawings have been separated into two categories: those clearly originating with the Plaistow Works and forming a numerical sequence and those clearly originating from other companies and works.

Physical Characteristics: The drawings are on a variety of materials: blueprints, cartridge paper, tracing paper, waxed linen and linen-backed paper. Some drawings have been made in pencil and others have a coloured ink wash. Sizes and condition are variable.

Administrative/Biographical History: The London, Tilbury and Southend Railway (LTSR) was opened in 1854 as a joint enterprise between the London and Blackwall Railway and the Eastern Counties Railway (later the Great Eastern Railway). The line was completed between Forest Gate and Southend in sections between 1854 and 1856. In 1862 the LTSR was made independent by act of parliament, though the board continued to be dominated by representatives from the original founding companies. Until 1875 the LTSR was worked under an uneasy and fractious leasing agreement between contractors Peto, Brassey & Betts, and the Eastern Counties Railway (later Great Eastern Railway), with stock hired from the latter. In 1875 the LTSR became more formally independent with Arthur Lewis Stride (1841-1922) as General Manager and Engineer.

The company continued to hire or buy stock from the GER and the North London Railway and later from the Midland Railway. However in 1879 the Plaistow Works was set up to supply the LTSR with locomotives and rolling stock. Initially some 4-4-2 tank locomotives were supplied by Sharp, Stewart & Co Ltd, gradually supplanting those supplied by the GER. The workshops were built by Kirk & Parry of Sleaford and were fully operational by 1881.

In 1879 Thomas Whitelegg (c1841-1911) from the Great Eastern Railway Works at Stratford was appointed Locomotive, Carriage & Wagon and Marine Superintendent at the Plaistow Works of the LTSR. He remained in this position until retirement in June 1910, when he was succeeded by his son, Robert Harben Whitelegg (1871-1957). Thomas had been a draughtsman at Stratford and Robert followed the same trade, joining the LTSR as draughtsman in 1888. The locomotive works did not build its own locomotives, which were purchased from outside contractors, but did carry out extensive repair and rebuilding work. From 1923 some types of locomotives were built for the London Tilbury and Southend Section by the LMS Works at Derby. LTSR Locomotive Types Ordered by Plaistow (excluding LMS)

Class Type Makers Dates Nos

No 1 4-4-2 Tank Sharp Stewart & Co; Nasmyth Wilson & Co 1880-1892 36

No 37 4-4-2 Tank Sharp Stewart & Co; Dubs & Co 1897-1899 12

No 49 0-6-0 Tender Sharp Stewart & Co 1899 2

No 51 4-4-2 Tank Sharp Stewart & Co: North British 1900-1903 18

No 69 0-6-2 Tank North British; Beyer Peacock 1903-1912 13

No 79 4-4-2 Tank Robert Stephenson & Co 1909 4

No 2100 4-6-4 Tank Beyer Peacock 1913 8

The LTSR continued to prosper and expand along with the expansion of the suburbs around Greater London and into Essex. On its own the company was reaching the limits of its capabilities to meet demand, and debate ensued between the GER and the Midland Railway over a takeover. In 1912 the LTSR was amalgamated with the Midland Railway. Whitelegg resigned rather than accept a subordinate position in the new company, but was replaced at Plaistow by his younger brother Stanley Herbert Whitelegg as 'Resident Mechanical Engineer' under the command of Henry Fowler, Chief Mechanical Engineer of the Midland Railway.

The works complex in 1912 consisted of a small Locomotive Works (including an erecting shop, boiler shop and machine shop), a Carriage and Wagon Paint Shop (converted from the old C&W shops) and a Carriage and Wagon Shops building that had once been the locomotive running shed. The overall set-up was cramped and confined.

Essentially reduced to a local maintenance role, the locomotive works at Plaistow were closed in 1925 by the London Midland and Scottish Railway, and any work transferred to the Bow Works of the former North London Railway. The Carriage and Wagon shops continued until 1931 when their work and some staff were transferred to Wolverton.

Drawings for the Plaistow Works originate both locally and from outside contractors, and after 1912 were increasingly supplied from Derby and Wolverton, with a small number linked to Bow. Additional drawings relevant to stock from the LTSR may therefore also be found in these collections. Catalogues of surviving drawings from the Derby Works and the Bow Works are also available at the National Railway Museum.
