Works Microfilm

Description: These are a selection from the Southern Railway Works drawings collection deemed to be of particular interest to researchers and preserved railways. The cards are listed in two tables – a main list of drawings from each of the main works and a smaller list of sketches. There are 943 drawings in total.

The main table of drawings has been sub-divided into the three constituent works of the former Southern Railway and British Rail (Southern Region). These were Ashford (formerly the South Eastern & Chatham Railway), Brighton (formerly the London, Brighton & South Coast Railway, both B and W series) and Eastleigh (formerly the London & South Western Railway and including the predecessor works at Nine Elms). There are 826 drawings in this series.

Details in the tables are drawn directly from the originals. Further information may be obtained by cross-reference with the full list of surviving original drawings (locomotives only) or works registers.

A small number of drawings are of poor quality and will not print out in fine detail. This has usually been indicated. Users of these aperture cards are advised that they should view the aperture cards before purchasing printed copies as there can be no guarantee that all details will be clearly visible.

The tables as set out include all drawings copied up to the present. The majority are from locomotives, but there are some from carriage and wagons. At all the works these were drawn in the same numerical series. The listing of the original carriage and wagon drawings from the former Southern works is still at an early stage and there may therefore be additions to the available aperture cards in due course.

System of arrangement: Ashford Works Drawings: These usually have an 'A' prefix. Where the drawing does not show the prefix one has been assumed.

Brighton Works Drawings: The majority of these drawings bear a 'B' prefix, and a smaller number bear a 'W' prefix, possibly indicating that they were made at the Waterloo drawing office.

Eastleigh Works Drawings: The drawings have been given an 'E' prefix, including drawings without a prefix originating at the Nine Elms works, as all the drawings have been registered in a single numerical sequence.

Contractors Drawings: These drawings are a small number for specific locomotives built by other companies on behalf of one of the Southern companies. These include North British, Neilson and Manning Wardle locomotives.

Sketches Microfilm

Description: The table of sketches primarily consists of drawings from the Ashford Works, though there are a small number from Eastleigh, mainly updates of earlier Ashford drawings. Where no works has been indicated the presumption has been that the drawing was made at Ashford. There is one drawing from Brighton showing the plan of the works in 1913 and one other drawing with a reference number prefix that does not fit any of the known arrangements. There are 117 drawings in this series.. They were usually component drawings made for ordering parts from other workshops. Included in this series is a small number of drawings with miscellaneous prefix references.
