

**Wolverton Early Locomotive Drawings List Series WOLV 3/1**

**Description:** Drawings are not usually numbered and some do not have dates. From time to time drawings are annotated with signature or initials, and these are listed on the table below. Where information is not present on drawings fields are left blank. Drawing title is copied word for word, extra contextual information (scope and content) is added in 'notes' field.

Drawings represent engines building of the time including drawings relating to 'Bloomers', include drawings from other works that have been transferred to Wolverton. The series includes drawings from private companies such as Stephenson and Hawthorne. Drawings mainly represent component parts of engines and other equipment. Drawings also reflect activities being carried out at the Works; include non locomotive drawings including plans for stationary engines, plans of equipment for use in workshops and elsewhere in the company. 1831-1876

**System of arrangement:** Because drawings do not usually have original drawing numbers they have been given artificial numbers. This enables ease of reference and retrieval. The series appears to be an unordered selection of drawings which appear to have little logical relation to one another, therefore reconstruction of original order has not been attempted. For retrieval please reference the WOLV code and piece reference

**Physical Characteristics:** Drawings have been given a condition rating 1-4

1. Good- generally good condition, few marks or tears, generally in tact, reasonable dirt coverage
2. Fair- some light damage, tears and markings but still comprehensible/legible
3. Poor- Heavy accumulation of dirt, large rips or tears, some areas illegible
4. Unacceptable- Major structural damage, illegible, very dirty, difficult to handle without damage to the drawing

Care should be taken when handling fragile drawings
